

I want to create a musical script (already written) and incorporate the sheet music (created with MuseScore) with the script so the end result is a booklet form script.

I tried "embedding" the pdf into the Word document; didn't work. I tried converting the pdf version into Word document (using pdfelement6-pro); fonts turn to gobbledygoop. (I attached an example, if you're curious about the results; tried MS UI Gothic and Arial Unicode Misc fonts with no better results.)

I am willing to pay for the needed pdf converter or whatever. but want to know if what I am buying will do the trick. The script can be either Word or pdf, but I would like it editable so I can add or fix page numbers and table of contents.

Has anyone else done this successfully?

Here I enter a score image
