

# “Test”

I'm trying to cut and paste several Lines of text from the word processing app, Libre Office, and paste it into a Frame in Musescore. (It's a musical theater project and I want to have a block of dialogue positioned above the music that will accompany it. )

The problem is none of the carriage returns from the original document are translating to Musescore, so it's one big line of text which spills out of the frame.

Of course, I can just add the carriage returns in after pasting it, but I was wondering if there's a better way?

This is my first Musescore project.
