The screenshot shows a music software interface. The top bar includes 'Palettes', 'Properties ...', 'Instruments', and '*Untitled score X'. The left sidebar has a 'Properties' panel with a 'General' section containing 'Visible' (checked), 'Auto-place' (checked), 'Cue size' (unchecked), and 'Play' (checked). Below are 'Playback' and 'Appearance' buttons. The 'Tremolos' section has a 'Style (between notes)' dropdown with three options, the first of which is selected. Below it are 'Stem direction' options: 'Auto', '↓', and '↑'. The main workspace shows a musical score with a treble clef and 4/4 time signature. A blue tremolo effect is applied to a note. A dashed box is visible above the staff. A measure number '10' is shown below the staff.

Not available, greyed out.

The screenshot shows the same music software interface as above. The 'Properties' panel is identical. However, in the 'Tremolos' section, the 'Style (between notes)' dropdown and the 'Stem direction' options are now greyed out. The musical score in the main workspace shows the same blue tremolo effect on a note, but the dashed box above the staff is now greyed out. The measure number '10' is still visible below the staff.
