

- QPrinter::Inch -> QPrinter::Point, 4 files, 6 occurrences
- pagesettings.cpp a lot of changes...
- page.cpp PageFormat::write() converts inches to 0.1 points as the unit for storage
PageFormat::read() converts 0.1 points to inches
Page::tm(), bm(), rm(), lm() margin functions, convert inches to points
- score.cpp cropPage() mm to inches, -> mm to pt
- exportxml.cpp writePageFormat() and all calls to it (it's a private function)
getTenthsFromInches() ditto
getTenthsFromDots() ditto
- file.cpp printFile() QPrinter::Inch, DPI conversions no more, p.scale(mag,mag)
savePdf() ditto x 3
saveSvg() DPI-related conversions no longer needed
- importxmlpass1.cpp doCredits()
MusicXMLParserPass1::defaults()
MusicXMLParserPass1::pageLayout() this takes a conversion factor, so all calls to it
- magbox.cpp MagBox::getMag() some DPI shenanigans
- musescore.cpp main() test mode shenanigans
- preferences.cpp PreferenceDialog::printShortcutsClicked() **hardcoded 25.4!!!** Plus other goofiness that needs review
- testutils.cpp MTest::SavePdf() same old thing
